WINDOWS & LINUX SOC DETECTION REPORT

Detection 005 — Suspicious Account Creation

Wazuh • Windows Security • Linux Authentication Logs

Status	Investigation required
MITRE ATT&CK;	T1136.001 — Local Account
Windows endpoint	window10 / 192.168.34.148
Linux endpoint	ubuntu_vm2 / 192.168.34.143
Rules	100501 / 100510 / 100511
Date	17 October 2026
Analyst	Vipin Kumar

1. Executive Summary

Wazuh detected local account creation on Windows and Linux. The dashboard search for rules 100501, 100510, and 100511 displayed 20 hits in the selected last-week range. The supplied details identify testuser_basic and testuser_sudo on Linux, and testuser_win and testuser_ps on Windows. Account creation is confirmed; unauthorized activity is not.

2. Environment

Wazuh manager: vm1; Windows endpoint: window10, agent 002, 192.168.34.148; Linux endpoint: ubuntu_vm2, agent 001, 192.168.34.143; Windows source: Security Event ID 4720; Linux source: /var/log/auth.log, useradd; date: 17 October 2026.

3. Detection Rules

100501: Windows local user account created, Level 10. 100510: Linux user account created, Level 8. 100511: Linux user account created with elevated privileges, Level 10. All map to MITRE ATT&CK T1136.001 — Create Account: Local Account.

4. Linux Finding — testuser_basic

Rule 100510, Level 8; event time 13:58:12.255546 UTC+05:30; endpoint ubuntu_vm2 (192.168.34.143); UID/GID 1001; home /home/testuser_basic; shell /bin/sh. The useradd log confirms account creation; authorization and use are unknown.

5. Linux Finding — testuser_sudo

Rule 100511, Level 10; event time 13:59:24.485296 UTC+05:30; endpoint ubuntu_vm2; UID/GID 1002; home /home/testuser_sudo; shell /bin/bash. The raw useradd log does not prove sudo group membership or sudoers access; verify privileges.

6. Windows Finding — testuser_win

Rule 100501, Level 10; Security Event ID 4720; event time 14:03:08.872 UTC+05:30; creator vipin; target account testuser_win; target SID ends -1006; record ID 46579. Event text reports the account as disabled and shows a Password Not Required flag. Verify current state and policy.

7. Windows Finding — testuser_ps

Rule 100501, Level 10; Security Event ID 4720; event time approx. 14:03:59.299 UTC+05:30; creator vipin; target account testuser_ps; target SID ends -1007; record ID 46585. Authorization and group membership remain unknown.

8. Dashboard Summary

Query: rule.id:(100501 OR 100510 OR 100511). Range: Last week. Count: 20 hits. This is the number of matching alert documents, not necessarily unique accounts. Windows and Linux activity are both visible.

9. MITRE ATT&CK;

T1136.001 — Create Account: Local Account (Persistence). The mapping is a behavioral classification, not proof of malicious intent.

10. Analyst Verdict

Account-creation detections validated; authorization and privilege assignment require review. The alerts confirm account creation but not unauthorized access. Verify testuser_sudo privileges and Windows account state.

11. Recommended Response

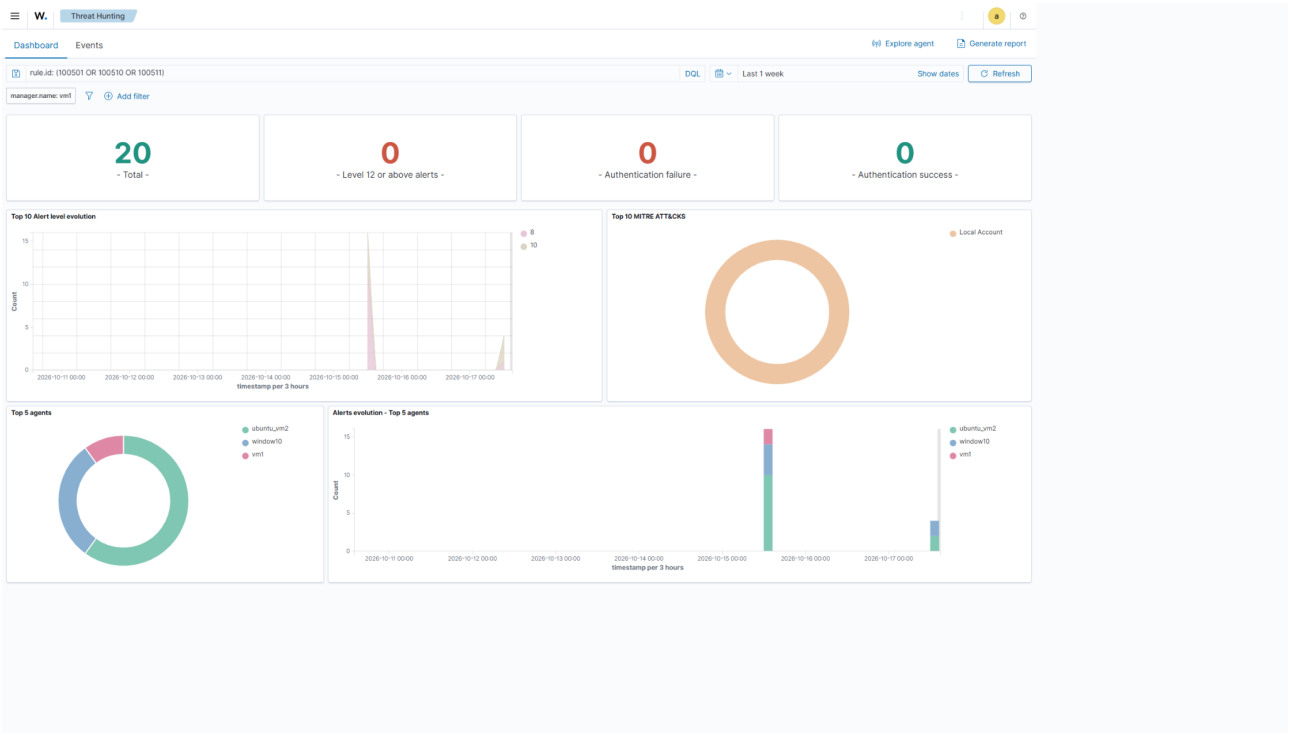

Confirm whether accounts were expected; inspect Linux groups and sudoers; check Windows enabled status and sensitive group membership; review related login, password, enablement, and group-change events; preserve logs before response; test custom rule XML and benign baselines.

12. Limitations and Conclusion

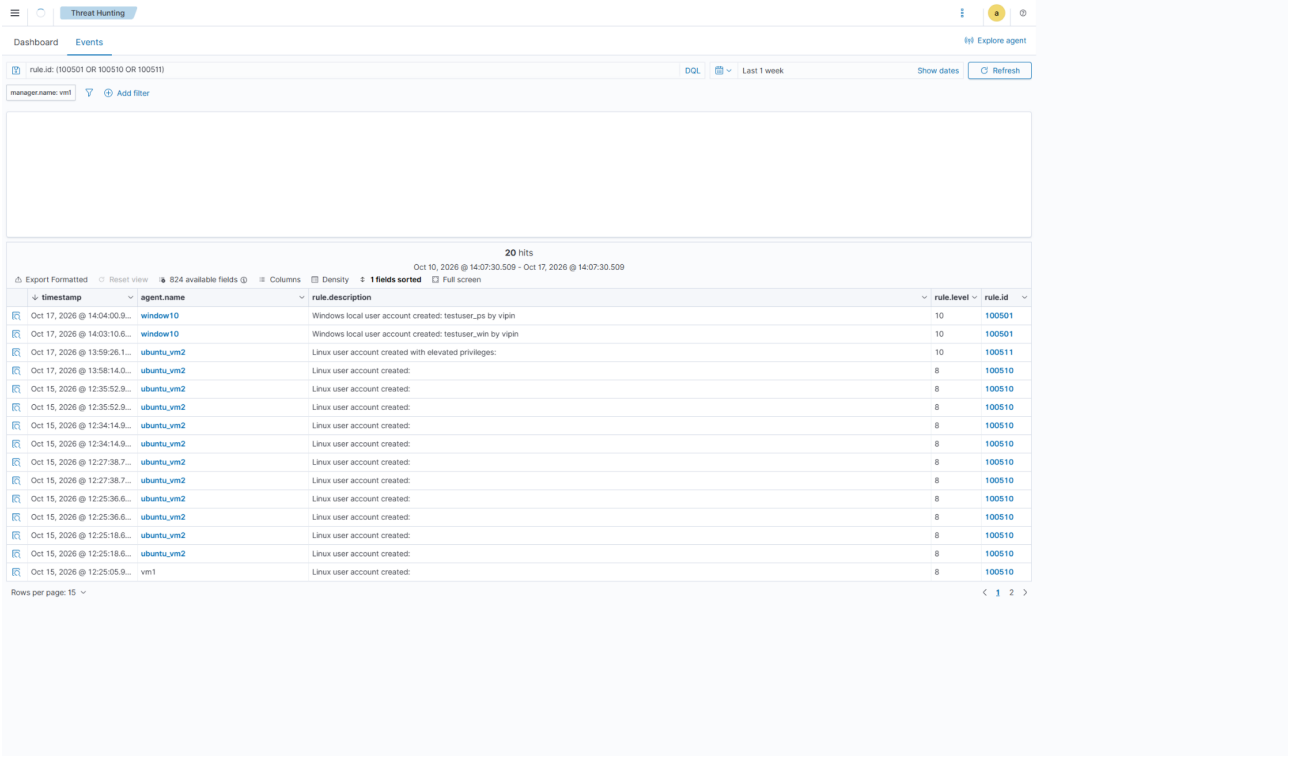

Custom rule XML was not supplied. Linux useradd events do not prove group membership and Windows account creation events do not establish later use. Wazuh detected account creation on both OS platforms; keep the case open until authorization and privileges are verified.
