CROSS-PLATFORM SOC DETECTION REPORT

Detection 007 — Persistence Monitoring

Wazuh • Linux Cron • Windows Scheduled Tasks

Status	Detection validated; review required
Verdict	Malicious persistence not confirmed
Linux endpoint	ubuntu_vm2 / 192.168.34.143
Windows endpoint	window10 / 192.168.34.148
Wazuh rules	100530 / 100531 / 100532 / 100533
Dashboard result	13 hits; 2 Level 12+
Date	17 October 2026
Analyst	Vipin Kumar

1. Executive Summary

Wazuh query rule.id:(100530 OR 100531 OR 100532 OR 100533) returned 13 hits in the selected last-week range, including two alerts at Level 12 or above. Linux FIM detected cron file changes and Windows Security Event ID 4698 recorded scheduled-task creation. Rule 100533 matched a task launching PowerShell with Write-Host persistence_test every minute. This appears to be lab validation; malicious persistence is not confirmed.

2. Environment

Wazuh manager vm1; Linux endpoint ubuntu_vm2, agent 001, 192.168.34.143; Windows endpoint window10, agent 002, 192.168.34.148; Linux telemetry Wazuh FIM/syscheck; Windows telemetry Security Event ID 4698; date 17 October 2026.

3. Detection Rules

100530: Linux cron file changes, Level 10, ATT&CK T1053.003. 100531: in query but no detailed alert supplied. 100532: Windows scheduled task created, Level 10, ATT&CK T1053.005. 100533: task runs a scripting engine, Level 12, ATT&CK T1053.005 and T1059. Rule XML was not supplied.

4. Linux Cron Finding

FIM detected /etc/cron.d/test_persist added around 14:50:20.836 local; /etc/cron.d/test_persist1 added around 14:52:14.167 and modified around 14:53:46.524. The file grew from 74 to 143 bytes and SHA-256 changed from 2da5023deafd4da57132d2d8c52332b0063e4eb658f837b84e0d92be126a99df to 0912ef515f64685158cba92fbd028a9942928dfab90e587ef1bae1b5af76d1b2. Cron contents were not supplied.

5. Linux Crontab Spool Activity

Around 14:53:56, FIM saw /var/spool/cron/crontabs/tmp.96btvJ added and deleted, and /var/spool/cron/crontabs/vm2 added. This may occur during crontab updates, but verify content and originating action.

6. Windows OneDrive-named Task

Rule 100532, Level 10, flagged creation by vipin of a task named OneDrive Standalone Update Task-S-1-5-21-...-1001. Event ID 4698, record 45525; event time 07:34:34.094 UTC (13:04:34.094 local). Action points to %localappdata%\Microsoft\OneDrive\OneDriveStandaloneUpdater.exe, with a daily trigger and least privilege. Validate actual binary path/signature; name alone proves neither legitimacy nor maliciousness.

7. Windows Task TestPersist1

Rule 100533, Level 12, flagged task \TestPersist1. Event ID 4698, record 46761; event time 09:29:05.198 UTC (14:59:05.198 local). Task enabled; repeats every minute; action powershell.exe -command Write-Host persistence_test; principal vipin; RunLevel LeastPrivilege. This is test-like task content and demonstrates the detection.

8. Windows Task TestPersist2

Dashboard shows rule 100532, Level 10, for \TestPersist2 created by vipin at about 14:59:15 local. The full task action is not available in the supplied details.

9. Dashboard Summary

Query rule.id:(100530 OR 100531 OR 100532 OR 100533); selected range last week; 13 hits; two Level 12+. ATT&CK categories shown include Cron, Scheduled Task, and Command and Scripting Interpreter. Hit counts may include related events.

10. MITRE ATT&CK;

T1053.003 — Cron; T1053.005 — Scheduled Task; T1059 — Command and Scripting Interpreter. These mappings classify behavior and do not prove malicious intent.

11. Findings and Verdict

Confirmed: Linux cron-related files changed; Wazuh generated FIM alerts; Windows Event ID 4698 recorded scheduled-task creation; TestPersist1 includes a PowerShell test command. Not confirmed: task execution, malicious intent, or compromise. Verdict: persistence detection validated; test behavior observed; malicious persistence not confirmed.

12. Recommended Response

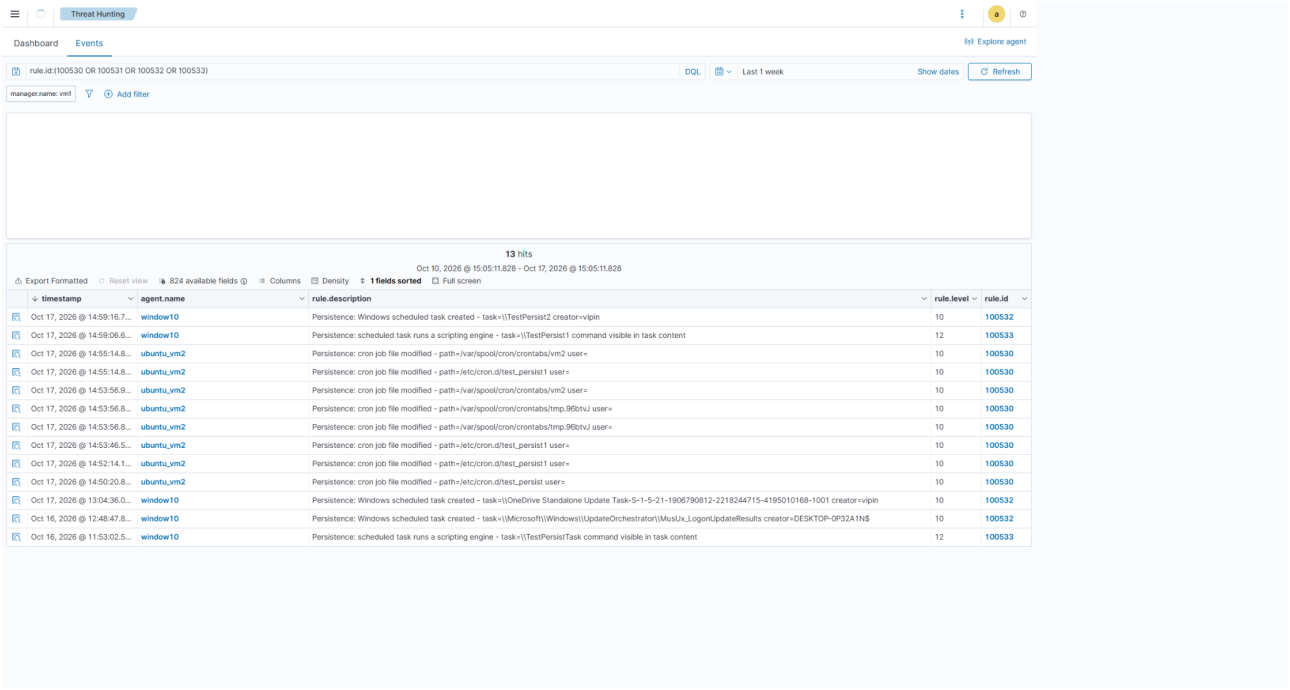

Confirm authorized lab activity; preserve and inspect cron files/task XML; validate the OneDrive binary path and signer; correlate PowerShell/process/task history; verify triggers, permissions, and run-as identity; obtain rule 100531 XML/example; remove test artifacts only after preserving evidence.

13. Limitations and Conclusion

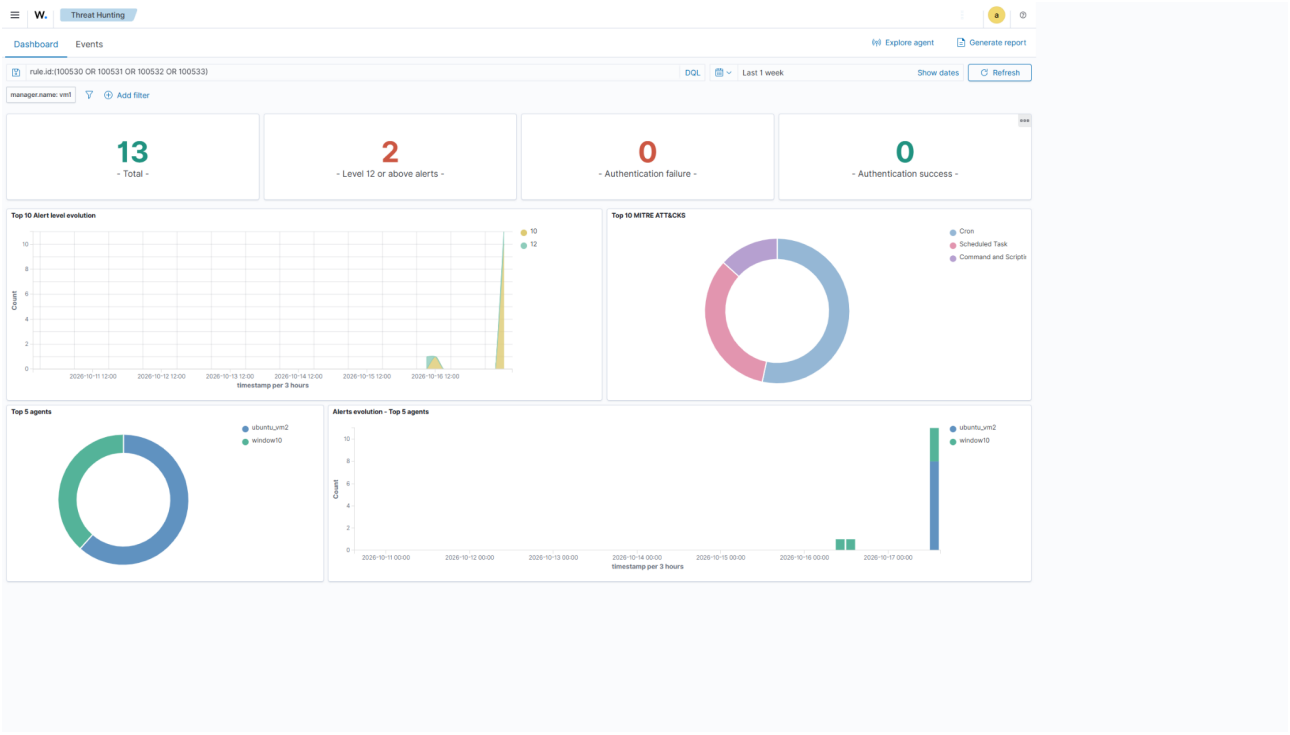

Rule XML and cron contents were not supplied. Event ID 4698 confirms task creation but not execution. The available evidence supports a cross-platform persistence detection lab, not a confirmed intrusion.
