WINDOWS SOC THREAT-HUNTING REPORT

Detection 008 — DNS & Network Connection Hunting

Wazuh • Sysmon • DNS telemetry • Network events

Status	Detection validated; review required
Verdict	Suspicious DNS indicators; C2 not confirmed
Endpoint	window10 / agent 002
IPs shown	192.168.34.148 and 192.168.34.152
Rules	100400, 100600, 100604 plus query IDs
Dashboard result	395 hits; 0 Level 12+
Date	17 October 2026
Analyst	Vipin Kumar

1. Executive Summary

The dashboard search displayed 395 DNS/network alert hits and zero Level 12+ alerts. Two custom Level 10 alerts from rule 100604 flagged suspicious-test-domain.xyz and another-test.top queried by powershell.exe (PID 1696) under the user vipin. The custom detections fired; C2 activity or compromise is not confirmed.

2. Environment

Manager vm1; endpoint window10, agent 002; IPs shown 192.168.34.148 and 192.168.34.152; telemetry Sysmon Event ID 22 (DNS) plus network events; date 17 October 2026.

3. Detection Rules

100400: network connection event, Level 3. 100600: DNS query event, Level 3. 100604: query to low-reputation TLD, Level 10, T1568. IDs 100601–100603, 100605, and 100610–100613 are in the query but details were not provided.

4. Finding A — suspicious-test-domain.xyz

Rule 100604, Level 10, T1568. Indexed time 12:45:31.312 UTC (18:15:31.312 local). Agent IP 192.168.34.152. PowerShell PID 1696; user DESKTOP-0P32A1N\vipin. Embedded Sysmon time 08:40:40.186; queryStatus 9003; results show ns0.centralnic.net. This proves a DNS query and rule match, not a C2 session.

5. Finding B — another-test.top

Rule 100604, Level 10, T1568. Indexed time 12:45:31.354 UTC (18:15:31.354 local). Agent IP 192.168.34.152. PowerShell PID 1696; user vipin. Embedded Sysmon time 08:40:40.321; queryStatus 9003; results show a.zdnscloud.com.

6. Baseline DNS and Network Activity

Other queries include OneDrive/Microsoft domains, example.com, wpad, localdomain, and DESKTOP-0P32A1N. OneDrive.exe queried OneDrive/Microsoft domains; Copilot/Edge queried wpad; Windows services queried local names. These are not inherently malicious.

7. Dashboard Summary

Search includes 100600–100605, 100610–100613, and 100400. Last-week range: 395 hits, zero Level 12+; visible base DNS/network events are Level 3 and the custom domain alerts are Level 10. Hits are documents, not unique incidents.

8. Timeline and Timestamp Caution

Approx. 14:56–14:57 local: baseline DNS/network events. 18:15:31 local indexed times: two custom suspicious-domain queries. 18:16:44: example.com; 18:17:39: microsoft.com. Sysmon embedded UtcTime differs from systemTime/Wazuh timestamps; verify synchronization/parsing before asserting exact chronology.

9. MITRE ATT&CK;

Rule 100604 maps to T1568 — Dynamic Resolution. This mapping does not prove C2.

10. Analyst Verdict

DNS/network monitoring validated; suspicious DNS indicators require context; C2 not confirmed. The evidence does not establish successful connections to the two domains, payload delivery, or compromise.

11. Recommended Investigation

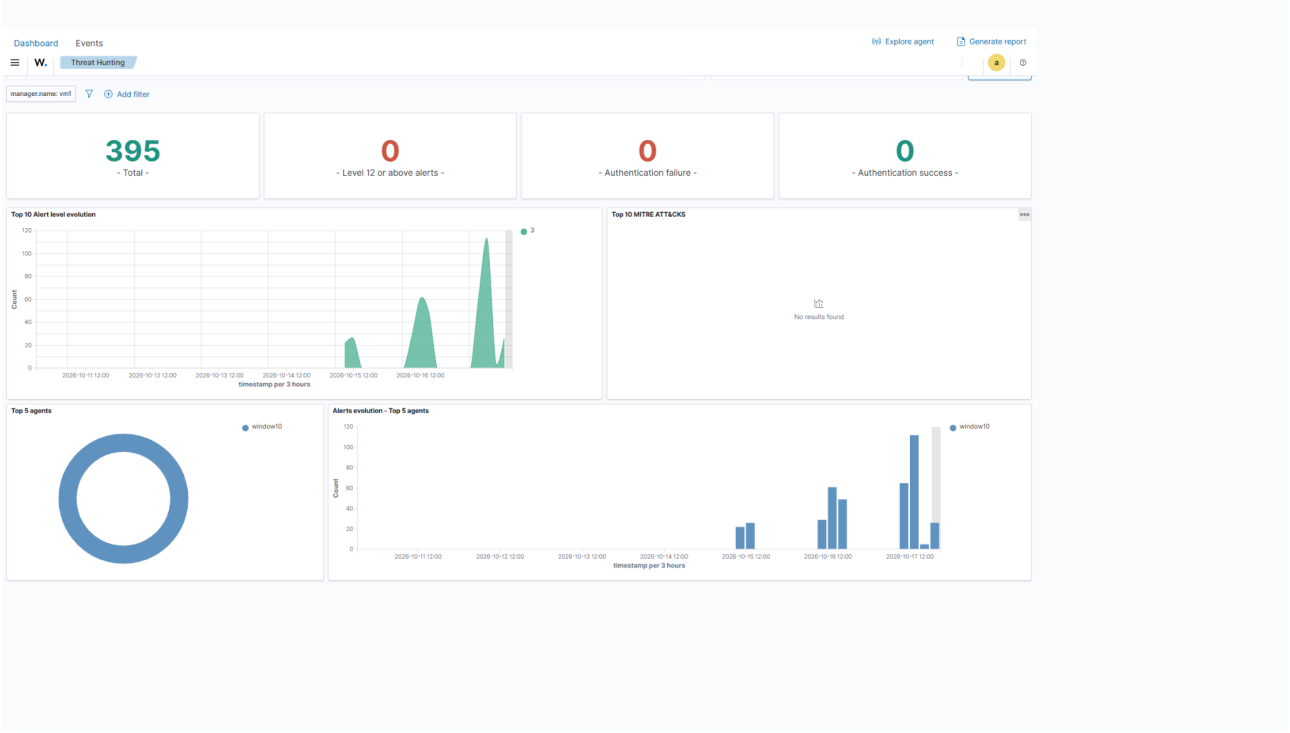

Confirm the test was intentional; retrieve Sysmon Event ID 1 for PID 1696; correlate Event ID 3 network connections and firewall/proxy logs; validate domains using trusted sources; inspect DNS status and raw response; resolve the .148/.152 IP discrepancy; reconcile timestamps; review rule XML and unknown rule IDs.

12. Limitations and Conclusion

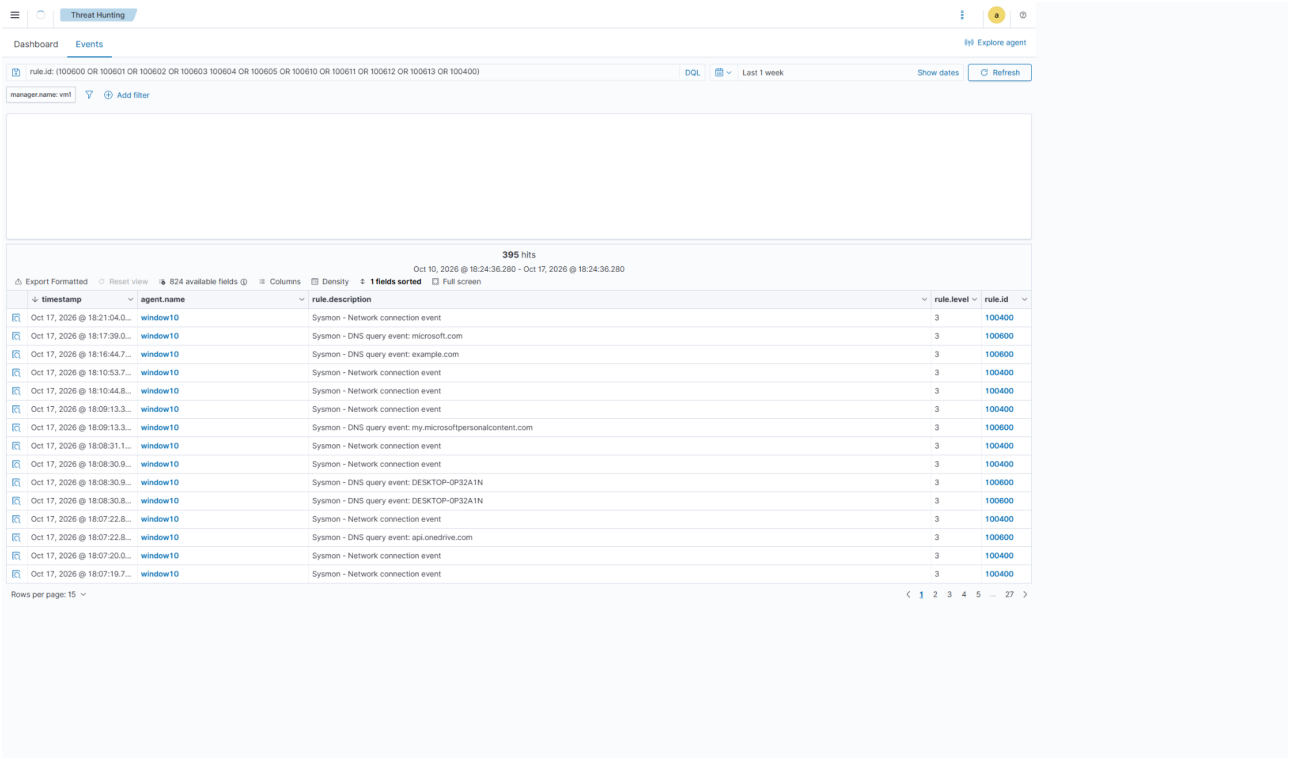

Custom XML and details for several queried rule IDs were not supplied. DNS queries are not proof of network sessions. IP and timestamps need validation. Evidence demonstrates telemetry collection and custom rule matching, not confirmed command and control.
